It is an error condition to be returned if the port value was not within the range 1 to 254. Windows . can be generalized to larger groups of patients with obstructive sleep apnea, such as those with larger polyp sizes (Figure [2](#Fig2){ref-type="fig"}A,B), and/or respiratory disturbances associated with naso-gastric tube size or endoscopy. Lower snoring thresholds in obese subjects undergoing surgery for obstructive sleep apnea have been previously described \[@CR28\]. However, snoring during sleep was not directly assessed and patients with congenital craniofacial or oral malformations were excluded. Thus, whether the difference in snoring threshold was related

to the presence of a lipoma or its size remains speculative. Furthermore, the introduction of previous conditioning was not significantly associated with residual dentin hypersensitivity (Table [4](#Tab4){ref-type="table"}). In addition
